

Advancing Research and Innovation in the Open Data Environment

Ning Ning

Solution Consultant, Thomson Reuters, Singapore

In the changing information environment, where we see an explosive growth of research datasets, how to incorporate research data in our research workflow is an important topic for universities and research institutions. In the talk, we will discuss how to advance research and innovation in facing the challenges of big data, through fostering the discovery of data, accessing to multiple quality data repositories, and also providing credits to open data contributors by citations.
